## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-16, drawn to methods of treating a subject exposed to a microorganism, comprising administering a compound in an amount effective to inhibit the binding of said microorganism to DC-SIGN.

Group II, claim(s) 17-19, drawn to methods of preventing infection by *Candida albicans* comprising administering a  $\beta$ -1,2 oligomannoside, FHENWPS, ICAM-2, ICAM-3, or antibodies that bind DC-SIGN.

Group III, claim(s) 20-32, drawn to methods of promoting an immune response in a subject exposed to a microorganism that binds to DC-SIGN, comprising administering an antigen found in said microorganism in an amount effective to bind to DC-SIGN.

### **Antigen Election Requirement Applicable to All Groups**

In addition, each Group detailed above reads on patentably distinct antigens. Each antigen or combination of antigens is patentably distinct because they are molecules with differing biochemical and immunological properties and a further restriction is applied to each Group. Applicant must further elect a single antigen or combination of antigens ( $\beta$ -1,2 oligomannoside, FHENWPS, ICAM-2, ICAM-3, or antibodies that bind DC-SIGN).

**Applicant is advised that examination will be restricted to only the elected antigen and this should not be construed as a species election.**

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Art Unit: 1645

The technical feature linking the inventions appears to be the administration of an antigen that binds to DC-SIGN.

However, Rosati *et al.* (Cell. Immunol., 162:256-264, 1995) disclose the administration of inactivated *Candida albicans* to induce an immune response. As evidenced by claim 29, inactivated *Candida albicans* contains antigens that bind to DC-SIGN; therefore, Rosati *et al.* disclose the administration of an antigen that binds to DC-SIGN.

Therefore, the technical feature linking the inventions of Groups I-III does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the art.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
